EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Larry B. Donovan (Reg No: 47,230) on 06/09/2009.

The application has been amended as follows:

In claims:

1. A method, comprising:
 - receiving a power signal from a power input;
 - receiving a data signal from a data input;
 - receiving an Ethernet primary communication signal;
 - sending the Ethernet primary communication signal to a network device on a first medium;
 - sending a discovery signal to the network device on a second medium;
 - receiving a discovery response from the network device via the second medium that is responsive to the discovery signal;

receiving an Ethernet secondary data signal;
converting the Ethernet secondary data signal into a bit-stream second
data signal;
multiplexing the data signal and the second data signal for transmission
on the second medium; and
concurrently providing a power signal modulated with a data signal and
the second data signal to the network device on the second medium after
receiving the discovery response signal.

Claims 4-9 (Canceled)

21. The apparatus of claim 20 wherein the sensing circuits require power and wherein the sensing circuits couple power and data signals and transmit them to the network device on the ~~shared~~ second medium.

34. An apparatus, comprising:
a power input for receiving a power signal;
a primary communication input for receiving an Ethernet primary communication signal;
a data input for admitting a data signal;
a second primary communication input for receiving an Ethernet secondary communication signal;

a first output coupled on a ~~shared~~ first medium to the network device;
a second output coupled on a ~~shared~~ second medium to the network device;

means for multiplexing the data signal and the Ethernet secondary communication signal;

means for modulating the multiplexed data signal and Ethernet secondary communication signal with the power signal;

a discovery signal generator;

a discovery signal detector;

wherein the Ethernet primary communication signal is provided to the network device on the first output; ~~and~~

wherein the means for modulating provides the power signal, data signal and Ethernet secondary communication signal on the second output;

wherein the ~~discover~~ discovery signal generator is responsive to send a discovery signal to the network device through the means for modulating on the second output; ~~and~~

wherein the discovery signal detector is configured to receive a discovery response signal that is responsive to the discovery signal via the means for modulating; and

wherein the means for modulating is responsive to provide the power signal to the network device after receiving the ~~discover~~ discovery response signal.

2. The following is an examiner's statement of reasons for allowance:

Claims 1-3, 10-12, 14-15, 17-22, 34 are allowed over prior art.

Claims 4-9, 13, 16, 23-33, 35 are canceled.

The prior art fails to teach and render obvious the features as claimed in independent claims for a method and an apparatus,

Claim 1:

“sending the Ethernet primary communication signal to a network device on a first medium;

sending a discovery signal to the network device on a second medium;

receiving a discovery response from the network device via the second medium that is responsive to the discovery signal;

receiving an Ethernet secondary data signal;

converting the Ethernet secondary data signal into a bit-stream second data signal;

multiplexing the data signal and the second data signal for transmission on the second medium; and

concurrently providing a power signal modulated with a data signal and the second data signal to the network device on the second medium after receiving the discovery response signal."

Claim 10:

"wherein the Ethernet primary communication signal is provided to a network device on a first medium;

wherein the data signal and the power signal are provided to the network device on a second medium;

wherein the discovery signal generator is configured to send a discovery signal to the network device through the modem on the second medium;

wherein the discovery signal detector is configured to detect a discovery response signal responsive to the discovery signal via the modem; and

wherein the discovery signal detector is responsive to detecting a discovery response signal to have the power signal provided to the network device on the second medium."

Claim 34:

"wherein the Ethernet primary communication signal is provided to the network device on the first output;

wherein the means for .modulating provides the power signal, data signal and Ethernet secondary communication signal on the second output;

wherein the discovery signal generator is responsive to send a discovery signal to the network device through the means for modulating on the second output;

wherein the discovery signal detector is configured to receive a discovery response signal that is responsive to the discovery signal via the means for modulating; and

wherein the means for modulating is responsive to provide the power signal to the network device after receiving the discovery response signal."

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
